Upload CSV or Excel

superstore.csv 15.1MB

Based on the analysis, the region that generated the highest total profit is Central. This is indicated by the raw result "Central" grouping the data by 'Region', summing up the 'Profit' values for each group, and then identifying the group with the maximum profit.

In other words, the Central region had the highest cumulative profit among all regions in the dataset.

Which region generated the highest total profit?"

The data shows that the Central region generated the highest total profit. This is based on the sum of the 'Profit' values for each region in the dataset. No specific profit amount is provided, but the result indicates that the Central region has the highest total profit among all regions.

✓ Grounded via code execution

What is the total quantity of 'Technology' category items sold in the 'United States'

Based on the data, the total quantity of 'Technology' category items sold in the 'United States' is 6939.

This result only includes sales from the 'Technology' category and the 'United States', so it does not account for any other categories or countries. The actual numbers may vary depending on the specific products and quantities within this category and country combination.

Grounded via code execution

View execution details

Generated Code:

result = df[(df['Category'] == 'Technology') & (df['Country'] == 'United States')]['Quantity'].sum()
